Halifax, N.S.

October 1991

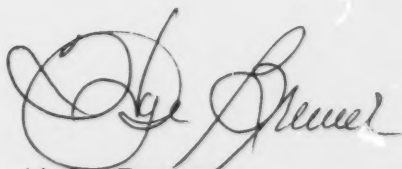

FOREWORD

For several years the New Brunswick Community College Graduate Follow-Up Survey has provided the Department valuable feedback concerning the success of the graduates in obtaining employment. This information has been used in the past, and will continue to be used in the future, in various planning activities. In most recent years the survey has also provided the graduates with an opportunity to evaluate certain aspects of their training, and student life at the College. This is also considered valuable feedback for the Department and it is being integrated into long term planning activities.

Since the survey itself is conducted in March of each year it is not surprising, considering the economic conditions in March of this year, that the overall employment rate decreased from 78.4%, in 1990, to 68.5%, in 1991. Similarly, and perhaps related to this low employment rate, the most significant decrease in student evaluation was in the category of "job preparation", which decreased by five (5) percent.

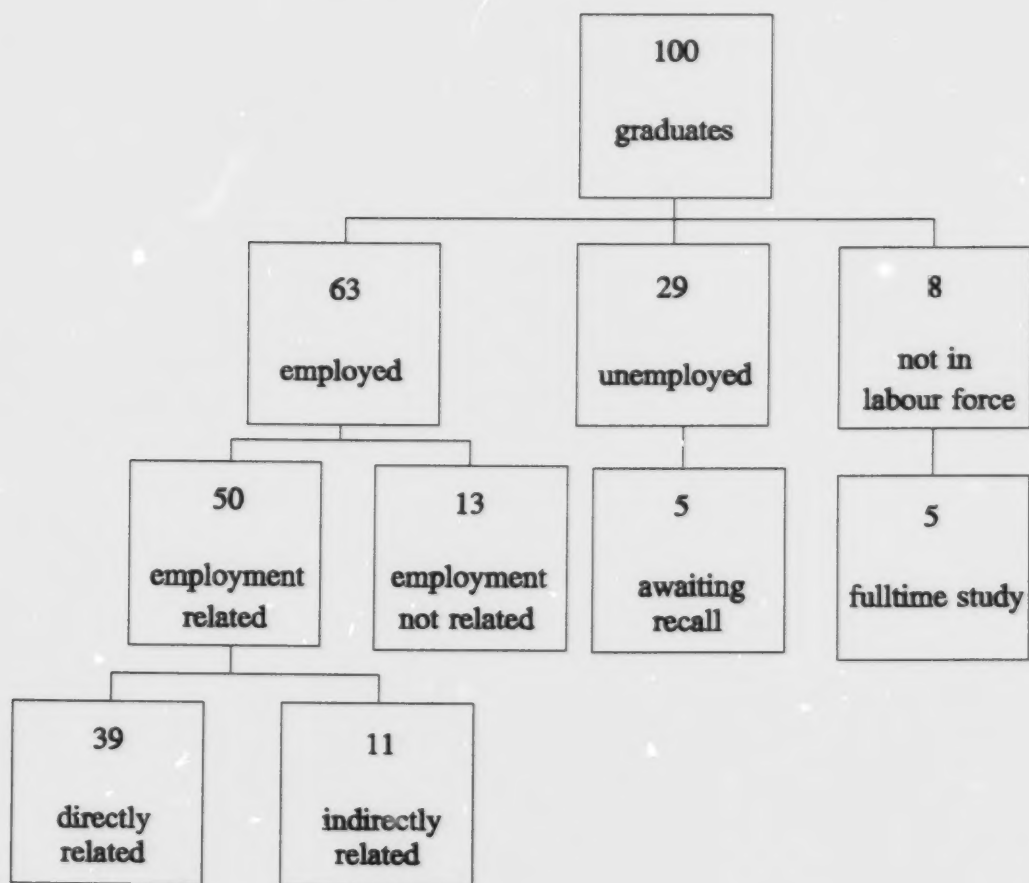

A new feature has been added to the Graduate Follow-Up Survey Report this year. After consultation with various Directors and College Principals it was felt that it would be beneficial to analyze the data from the survey at the College level. Therefore, this document contains not only a Factsheet for each program but also a Factsheet for each College where the Program was offered. This additional analysis has resulted in one hundred fifteen (115) Factsheets being added to the report.

I wish to express my appreciation to both Baseline Market Research Ltd. for their completion of over two thousand telephone interviews. And to Omnifacts Research Ltd. for the analysis of the data and the completion of the report and the Factsheets.

Hope Brewer

all graduates 1991

EXECUTIVE SUMMARY

The Department of Advanced Education & Training's Graduate Follow-up Survey was conducted by telephone for the third consecutive year. From a survey population of two thousand five hundred and twenty-one (2521) graduates, two thousand and fourteen (2014) were interviewed. This is the highest response rate in the history of the survey (80%).

Once again, more than nine in ten (92%) graduates were in the labour force. However, employment levels dropped precipitously from the 1990 level, falling under 70% for the first time since 1986. This is most likely purely a function of the current economic recession. Graduates' work was also less likely to be related to their training than last year, but average weekly earnings increased by five percent.

This year's survey is essentially the same as last year's. The two evaluative categories included last year (student services and student life) were maintained. Also, NB Craft School graduates were included again this year, while graduates of upgrading programs were excluded.

Trends

- * The gap between men's and women's employment rates continues to widen in favour of women.
- * Employment in New Brunswick continues to rise, reaching 95% this year.
- * Average full-time earnings continue to rise.
- * An increasing proportion of graduates had their training sponsored by CEIC.
- * Occupational diversity continues to increase, while industrial concentration is again up from last year.
- * For the second year, student services and student life received the lowest evaluations from the graduates.

Trends to Watch

- * The labour force participation rate of women fell this year; the gap now existing between the rates of women and men is the widest in five years.
- * The overall employment rate fell for the first time since 1986, to 69%.
- * Women's full-time employment, rising up to last year, dropped this year.
- * A significantly smaller proportion of employed graduates had permanent jobs in 1991 than was the case last year.

SURVEY BACKGROUND

Since 1983, the Department of Advanced Education and Training has been tracking graduates from programs offered by the New Brunswick Community Colleges through a follow-up survey. Every spring, graduates of the regular training programs (those of at least 20 weeks duration) from the previous academic year are surveyed. These students would have graduated at least nine months earlier.

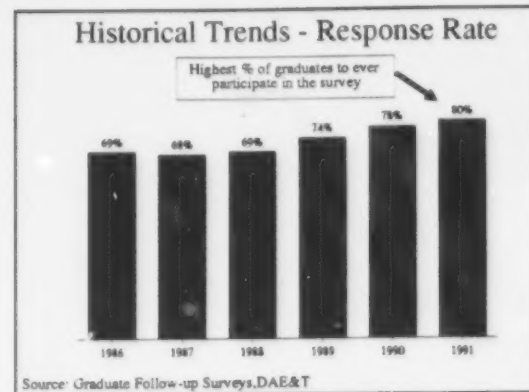

Since its inception, the Graduate Follow-Up Survey has been annually streamlined and improved. Since background data on graduates is available through a cross-reference of records with the Student Information System (SIS), the survey itself can focus on the post-graduation activities of students.

The survey questionnaire is basically the same as that used last year. The two new evaluative categories of student services and student life were included again this year. Once again, programs in the Academic Upgrading cluster were excluded from the analysis and graduates from the New Brunswick Craft School were included. Analysis by sponsorship has also been dropped.

As was the case last year, the report opens with a profile of graduates, followed by an overview of the survey results, including summary tables. Factsheets for each college, cluster and program, along with a summary Factsheet, follow the summary section. A Users' Guide explains how to interpret the Factsheets.

RESPONSE RATE

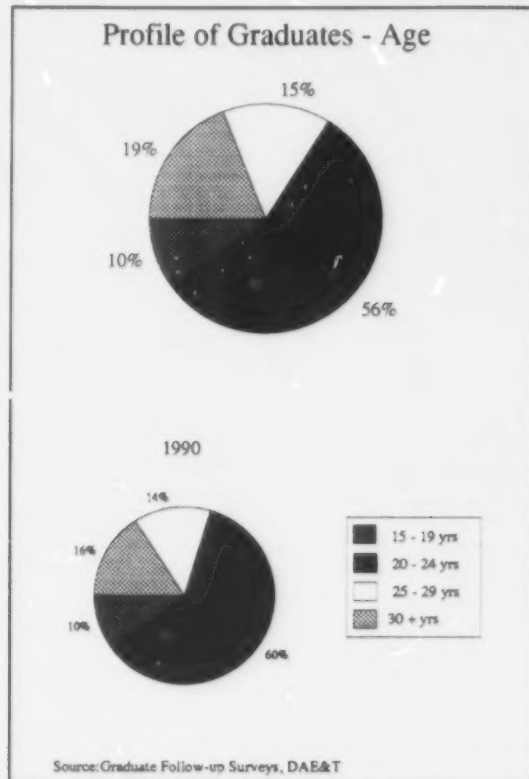

The 1991 graduate follow-up survey was conducted by telephone; this marks the third year in a row that information has been collected in this manner. Survey response rate continued to climb in 1991, reaching 80%, the highest rate recorded to date and up from 78% in 1990. There were two thousand, five hundred and twenty one graduates in the 1991 survey population, up 452 people from 1990. Two thousand and fourteen (2014) graduates were surveyed this year; 1108 of the graduates in the survey population were women and 1413 were men.

PROFILE OF GRADUATES

Age

The percentage of graduates in the 20 to 24 years of age bracket fell in 1991 to 56%, down from the 61% recorded in 1990. The second largest group was graduates over the age of 30, which rose from 16% of the sample last year to 19% this year.

GRADUATE FOLLOW-UP SURVEY 1991

Gender

There were slightly more females than males in the 1991 study. Fifty-five percent of those surveyed were female and 45% were male. While most 1990 programs seemed to be either male or female dominated, in 1991 there was not as much program domination. While Hospitality/Tourism and Business were the only programs in 1990 to have less than 75% either male or female students, there were four such programs in 1991: Hospitality/Tourism, Business, Protective Services and Applied Arts and Communications.

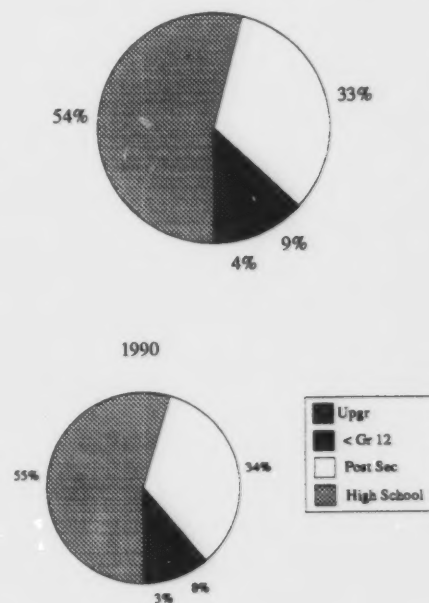

Profile of Graduates - Gender

Source: Graduate Follow-up Surveys, DAE&T

Schooling

The educational background of graduates in 1991 was virtually identical to that seen in 1990. Once again, 54% indicated that high school was their highest level of education prior to training and one-third (33%) had some post-secondary training.

Profile of Graduates - Schooling

Source: Graduate Follow-up Surveys, DAE&T

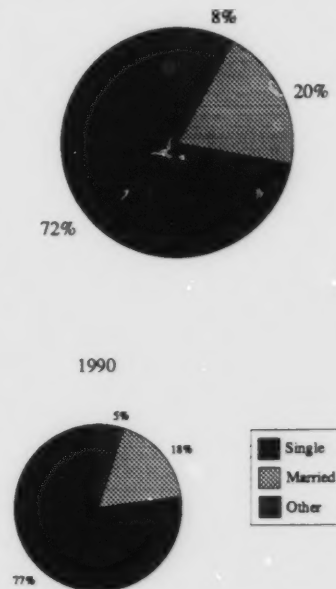

GRADUATE FOLLOW-UP SURVEY 1991

Marital Status

The percentage of graduates who were single fell in 1991 to 72% from 77% last year. The number of married graduates rose from 18% in 1990 to 20% in 1991.

The percentage of graduates with dependents was unchanged from last year, standing at 17%.

Profile of Graduates - Marital Status

Source: Graduate Follow-up Surveys, DAE&T

LABOUR FORCE PARTICIPATION

Participation in the labour force by NBCC graduates remains high at 92%, although it has dropped slightly from the 93% level recorded in 1990.

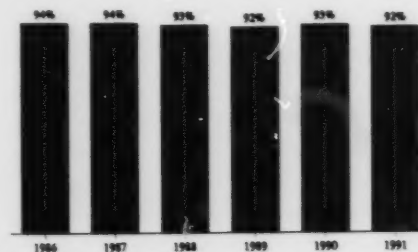

Only eight percent of graduates surveyed were not in the labour force, a proportion approximately equal to that recorded in 1990. The percentage of graduates not in the labour force because of full-time study continues to drop. This year, it fell to 61%, compared with 67% in 1990 and over 80% in 1989. The most common other reasons for absence from the labour force were that graduates were ill or disabled (14%) or were tending to personal or family responsibilities (15%).

Gender

In 1991, the spread between male and female participation in the labour force was the widest of any time in the last five years. The gap had been closing since 1987 and by 1990, the female participation rate equalled that of males at 93%. However, in 1991, participation by females in the labour force fell to 90%, while the rate for males increased to 94%.

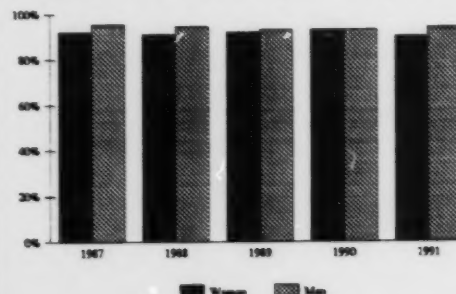

Women accounted for more of the graduates not in the labour force in 1991. Of the 154 graduates not in the labour force, 90 of them were women and 64 were men.

Historical Trends - LF Participation

Source: Graduate Follow-up Surveys, DAE&T

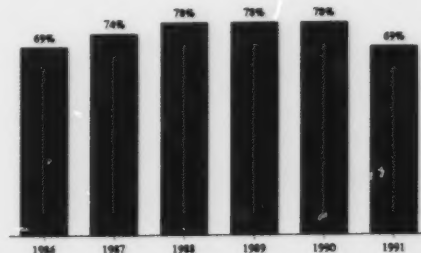

Labour Force Participation By Gender

Source: Graduate Follow-up Surveys, DAE&T

EMPLOYMENT

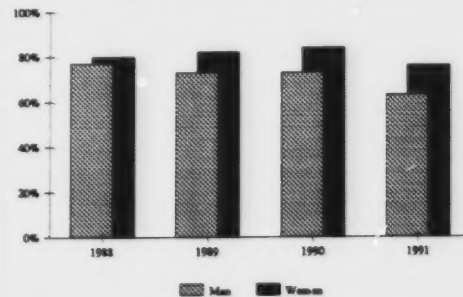

The employment rate of graduates in the labour force suffered a noticeable decrease in 1991. While the employment rate had been holding steady at 78% since 1988, the rate in 1991 fell to 69%. This decrease brings the employment rate back to the 1986 level.

Historical Trends - Employment Rate

Source: Graduate Follow-up Surveys, DAE&T

Gender

The gap between the male and female employment rate continues to widen as it has for the last three years, however rates for both males and females were lower in 1991. While the female employment rate was 84% in 1990, this year it dropped to 76%. The male employment rate dropped from 73% in 1990 to 63% in 1991. The gap between the male and female rates now stands at 13%, the largest such gap in four years.

Employment Rate by Gender

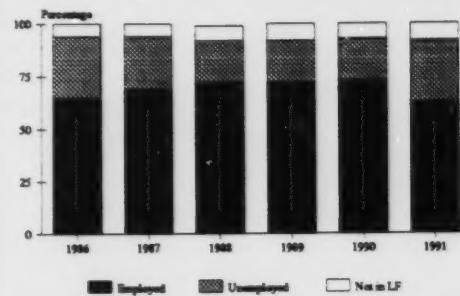

Source: Graduate Follow-up Surveys, DAE&T

GRADUATE FOLLOW-UP SURVEY 1991

Labour Force Activity

After three years of stability in the labour force profile of graduates, unemployment has increased by 9% in 1991, to 29%, while the proportion employed has fallen to 63% of all graduates, from 73% in 1990.

Historical Trends - Labour Force Results

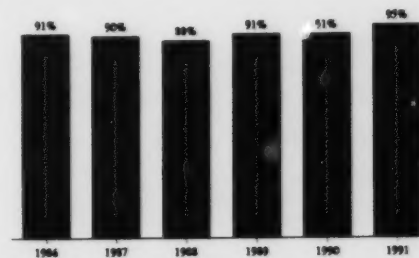

Source: Graduate Follow-up Surveys, DAE&T

Employment in New Brunswick

The percentage of employed graduates working in New Brunswick has reached its highest level since 1986, with 95% employed in the province.

Historical Trends - Employed in NB

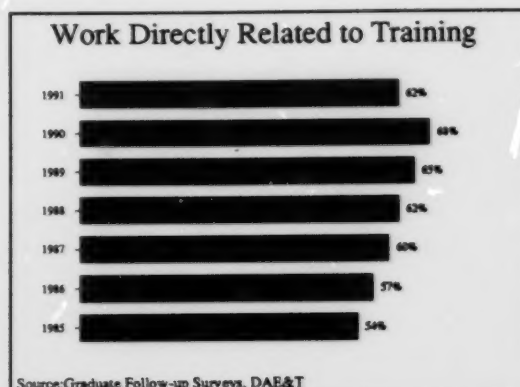

Source: Graduate Follow-up Surveys, DAE&T

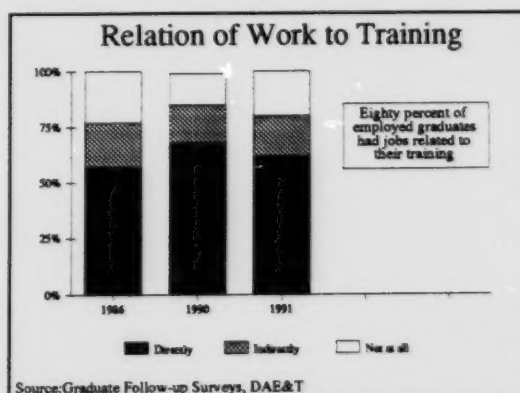

GRADUATE FOLLOW-UP SURVEY 1991

Relation of Work to Training

The percentage of graduates working in jobs directly related to their training had been increasing since 1983, however the rate dropped slightly in 1991. Sixty-two percent of graduates in this year's survey directly applied their training, down from 68% in 1990. This decrease brings the rate back to the level recorded in 1988.

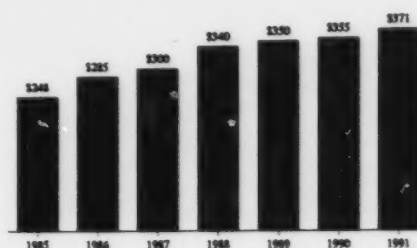

The percentage of graduates with work indirectly related to their training grew slightly in 1991, from 17% last year to 18%. Combining the results, the total percentage of graduates with work directly or indirectly related to their training fell to 80% in 1991 from 85% in 1990, and the number of people working in areas not at all related to their training increased from 14% to 20%.

Average Weekly Full-time Earnings

Although employment has decreased since 1990, average weekly full-time earnings among graduates has increased, to \$371 from \$355 in 1990.

Average Weekly Full-time Earnings

Source: Graduate Follow-up Surveys, DAE&T

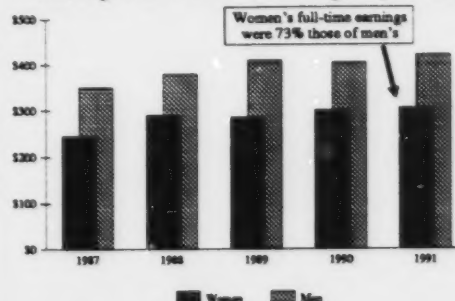

Gender

Weekly full-time earnings in 1991 increased for both sexes from 1990 levels. Women earned an average of \$306 per week, up from \$300 last year. The corresponding figure for men was \$421 (up from \$405 in 1990).

Women's full-time earnings in 1991 represented 73% of men's, a proportion similar to that recorded in 1990.

In last year's report, it was speculated that women's relatively low earnings accounted for their greater tendency not to disclose weekly earnings information. This year's data tend not to support that theory; disclosure rates were relatively equal (85% for men, 82% for women), although a large gender disparity remains in earnings.

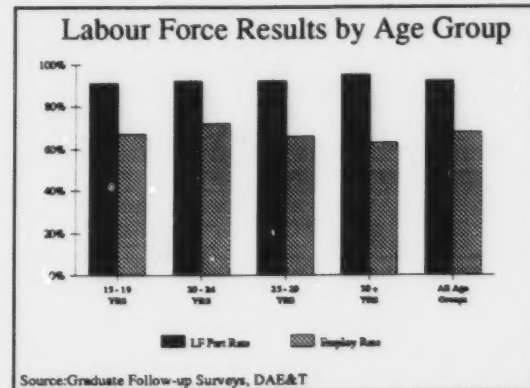

Weekly Full-time Earnings by Gender

Source: Graduate Follow-up Surveys, DAE&T

AGE

In 1991, labour force participation rates for all age groups were less than 93%, except for graduates over 30 years of age. This latter group had the highest participation rate (95%), but the lowest employment rate (63%). Graduates between the ages of 15 and 19 had the lowest participation rate, at 91%; all other age groups had participation rates of 92%. The highest employment rate (72%) corresponded to graduates between the ages of 20 and 24.

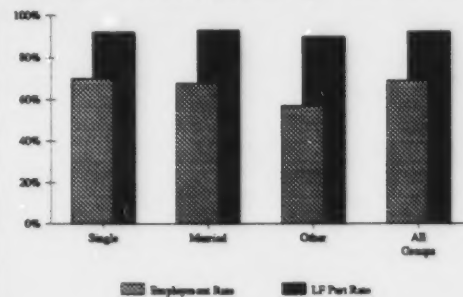

MARITAL STATUS AND DEPENDENTS

As indicated in the profile of graduates, 72% were single, 20% were married and the remaining 8% were separated, divorced or widowed. As was the case last year, there was little difference in participation rates by marital status. The "other" group, like last year, had the lowest participation rate at 90%, down from 91% in 1990. This group also had the lowest employment rate (57%) which was noticeably lower than that for married graduates (68%) and single graduates (70%).

Dependents

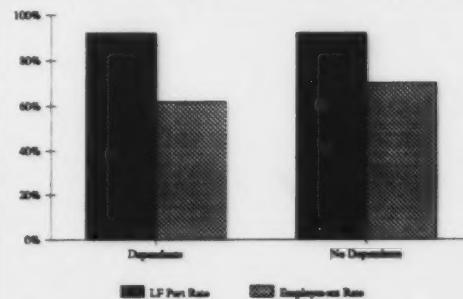

Seventeen percent of graduates had dependents. Participation rates were the same for graduates with and without dependents, however there was some difference in employment rates between these groups. While graduates with no dependents had an employment rate of 70%, those with dependents had a lower employment rate (62%).

Labour Force Results by Marital Status

Source: Graduate Follow-up Surveys, DAE&T

LF Results by Presence of Dependents

Source: Graduate Follow-up Surveys, DAE&T

JOB STATUS

Levels of full- and part-time employment in 1991 were virtually the same as in 1990. Eighty-five percent of employment was reported as full-time in 1991, down from 86% in 1990. Part-time employment rose from 12% in 1990 to 13% in 1991.

As was the case last year, it was more likely for graduates working part-time to have jobs not at all related to their training (39%) than for those with full-time employment (17%).

Gender

Women were much more likely to work on a part-time basis in 1991 than were men. Nineteen percent of women worked on a part-time basis compared with 8% of men. The percentage of both men and women working full-time decreased in 1991; the percentage of men working full-time fell from 92% to 91%, while the percentage of women doing so fell from 81% to 79%. Of those graduates working on a part-time basis, 70% of them were female.

Full-time vs Part-time Employment

FT vs PT Employment for Men

Source: Graduate Follow-up Surveys, DAE&T

FT vs PT Employment for Women

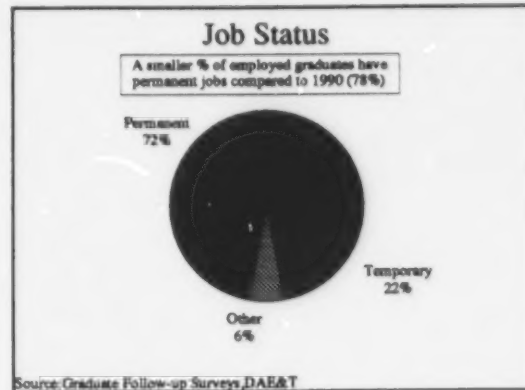

Source: Graduate Follow-up Surveys, DAE&T

GRADUATE FOLLOW-UP SURVEY 1991

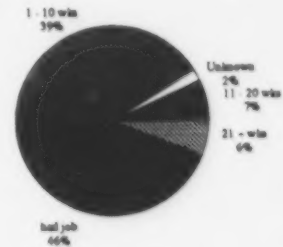

Permanency of Work

The percentage of employed graduates having permanent jobs fell six percent in 1991, to 72%. Temporary employees accounted for 22% of employed graduates, up from 18% last year. The number of self-employed graduates increased from 25 in 1990 to 26 (or 2%) in 1991.

JOB SEARCH

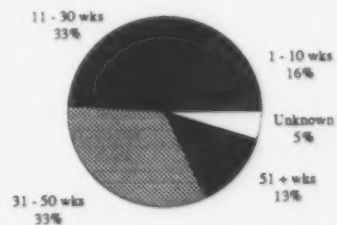

Eighty-five percent of graduates had their present job within ten weeks of searching for employment. Forty-six percent of graduates either had their job already or were approached directly by the employer. A further 39% spent between one and ten weeks finding their current job.

Length of Job Search

Source: Graduate Follow-up Surveys, DA&T

Time in Job

Just under half of employed graduates had been working at their present job for 31 weeks or more, indicating a ready job market at the time of graduation. A further 33% had been working between 11 and 30 weeks.

Time in Current Job

Source: Graduate Follow-up Surveys, DA&T

SURVEY RESULTS BY COLLEGE

Response Rate

There was little variation in response rates between the colleges this year, with only an eight point spread between the colleges with the highest response rate (Woodstock and Edmundston - 85%) and that with lowest (Miramichi - 77%). However, it is noteworthy that Miramichi was, in 1990, the college with the highest response rate.

Labour Force Results

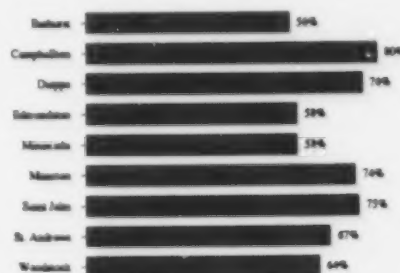

Graduates of the Saint John college had the highest labour force participation rate in 1991, with 97% in the labour force. Ninety-four percent of the graduates of both the St. Andrews and Bathurst colleges were in the labour force. Only Edmundston, at 81%, recorded a participation rate below 90%.

Campbellton recorded the highest employment rate (80%), with Dieppe following at 76%. Bathurst showed the lowest employment rate at 56%, with graduates of the Edmundston and Miramichi colleges also having a less than 60% employment rate.

No college had fewer than ninety percent of their employed graduates working in New Brunswick and, as was the case last year, over 95% of graduates of the Saint John and Woodstock colleges worked in the province.

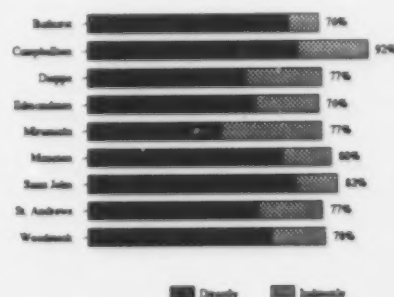

Just as employment rates by college were down this year, so were the rates of related employment. When employment either directly or indirectly related to training was examined, only four colleges showed more than eighty percent of graduates with jobs related to their training. Campbellton had the highest proportion of employed graduates whose work related to their training (92%), while Edmundston showed the lowest (76%). In no college did even 70% of employed graduates indicate that their work was "directly" related to their training.

Employment Rate by College

Source: Graduate Follow-up Surveys, DAE&T

Relation of Work to Training by College

Source: Graduate Follow-up Surveys, DAE&T

NB CRAFT SCHOOL

The NB Craft School is a nationally acclaimed, specialized post-secondary institution. Candidates pass rigorous entrance requirements to gain admittance into the institution. Once there, they pursue their "craft" as opposed to a "trade". Self-employment is more likely to be the sought-after outcome rather than an employee/employer relationship.

In 1991, there were fifteen graduates in the follow-up survey population, of which twelve were actually surveyed. Nine of these twelve were participating in the labour force, and five of the nine were employed (four of them in New Brunswick). In addition, four of the five graduates employed reported working in a job directly related to their training.

SURVEY RESULTS BY CLUSTER

All programs offered at the colleges are assigned to one of 18 clusters of study. As was the case last year, programs from 16 of these clusters were surveyed: programs in the Academic Upgrading were excluded because of the small population and there were no programs in the Heavy Equipment Operation cluster to be surveyed.

Gender Domination

A cluster can be said to be "dominated" by a gender if at least 75% of the students in the cluster are of that gender. On that basis, only four clusters were not dominated by one gender or the other: Business, Hospitality/Tourism, Applied Arts and Communications and Protective Services. Interestingly, these last two clusters were gender-dominated last year. Even though fewer clusters were dominated this year than in 1990, the same number of clusters (8) had more than 90% representation by one gender.

Cluster	% Male	%Female
Electronics	94%	6%
Heat, Vent & Air Conditioning	97%	3%
Mechanical - Industrial	93%	7%
Mechanical - Motorized Equip	98%	2%
Metals	99%	1%
Wood & Related Materials	92%	8%
Personal Services	4%	95%
Secretarial/Clerical	4%	96%

The most notable difference in terms of gender representation in the clusters compared with last year is in the Protective Services cluster. Last year, the representation of females in this cluster fell from 43% to 21%. This year, it's back up to 40%. This seems to indicate that last year's figure was an aberration.

Labour Force Results

All clusters but four had more than ninety percent of their graduates in the labour force. Heating, Ventilation and Air Conditioning was the only cluster with a 100% labour force participation rate. Mechanical-Industrial was next at 98%. The Secretarial/Clerical cluster had the lowest participation rate (80%).

All clusters saw employment rates of less than 90%, with the highest rate (89%) in the Health/Community Services and Business clusters. Graduates from the

Metals cluster had the lowest employment rate at 48%, while graduates of programs in the Construction cluster also had a less than 50% employment rate. Wood and Related Materials, which had an employment rate of 41% last year, rebounded to 58% in 1991.

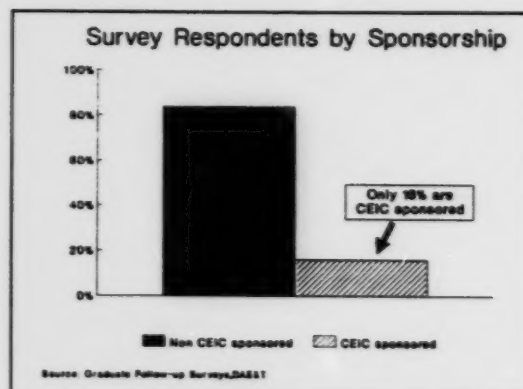

Protective Services was the only cluster in the 1991 survey in which all employed graduates were working in New Brunswick. Health/Community Services (99%) was next in line. The number of clusters in which more than 20% of graduates work outside the province has fallen to zero this year, from two in 1990 and four in 1989. The lowest rate of employment in New Brunswick this year is shared by Drafting and Design and Wood and Related Materials (86%).

All employed graduates from the Wood and Related Materials cluster had jobs related to their training. Health/Community Services was next at 96%. Once again, Heating, Ventilation and Air Conditioning has the lowest rate of employment related to training (56%), with Protective Services at 60%.

The Factsheets provide more detailed results for each cluster.

SPONSORSHIP

CEIC sponsorship of all graduates had fallen to the low reached last year of 12%. Comparative data is not available for all graduates this year. However, it is available for all respondents who actually are 80% of the graduates. Thus, it is fairly probable that the 16% of respondents who are CEIC sponsored would likely reflect a similar 16% of all graduates. Thus, CEIC sponsorship appears to be increasing.

OCCUPATIONS

The occupational concentration among graduates has again been reduced, with 37% of employed graduates working in ten occupational categories, compared with 40% in 1990 and 43% in 1989.

Gender

Men once again show less occupational concentration, with 39% working in ten categories, while 58% of women were employed in ten occupational groups. These figures are virtually identical to those recorded in 1990.

INDUSTRIES

While the trend in graduate employment is towards reduced occupational concentration, the industrial concentration of employment continues to increase. This year, 57% of employed graduates worked in ten industrial categories, compared with 54% in 1990 and 52% in 1989. However, the number of industrial categories named increased to 62 from 59 last year.

Health and Social Services

As has been the case in the past, the largest proportion of employed graduates (14%) worked in the health and social services industry. This figure is the same as that recorded in 1989.

Gender

Seven of the top ten industrial categories for both men and women in 1991 were the same as those reported in the 1990 survey. Women showed an increased industrial concentration this year, with 73% working in the top ten industrial groups, compared with 66% last year. Men, on the other hand, showed a relatively stable industrial concentration, with 54% employed in ten industrial categories. In 1990, 52% were employed in the top ten categories.

FURTHER STUDY

After last year's decline (the first in four years), the number of graduates taking further studies increased this year from the 9% recorded in 1990 to 11% this year (or 228 graduates).

Reasons

Exactly half of those graduates taking further study wanted to upgrade their existing skills, down from 55% in 1990 but higher than the 40% recorded in 1989. As was the case last year, the next most popular reason for further study was to obtain a university degree (15% or 34 graduates, up from 12% last year).

Full-time Study

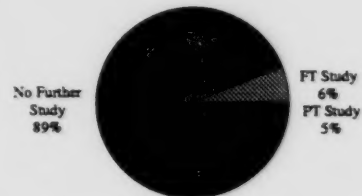

The proportion of those taking further study who are studying on a full-time basis has declined this year, from 61% to 57%.

The table below shows the programs with the highest numbers of graduates taking further study.

Highest # of graduates taking further study

Scenographer	28
Motor Vehicle Repair (Mech)	19
Business Tech - Accounting	14
Clerk Typist	11
Welding	10
Accounting Clerk	8
Accom, Food & Bev Services II	8

Graduates Taking Further Study

Source: Graduate Follow-up Surveys, DAE&T

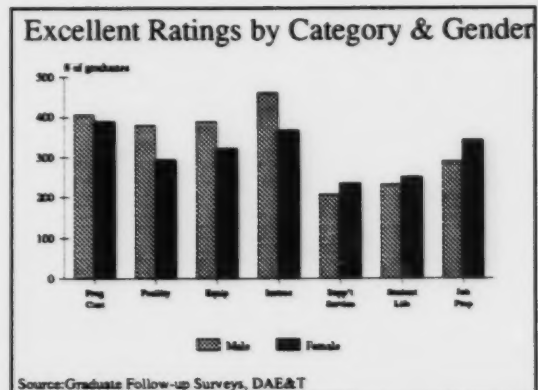

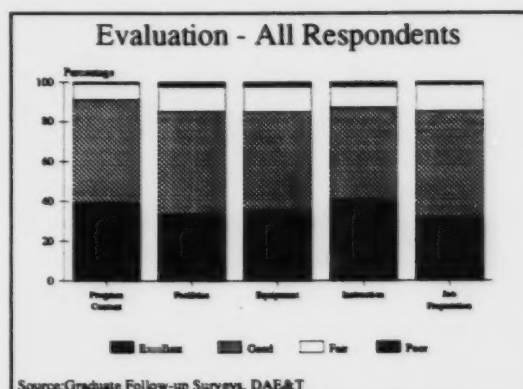

EVALUATION RESULTS

As was the case last year, graduates were asked to evaluate their training according to the following: program content, facilities, equipment, quality of instruction and preparation for a job. The categories of student services and student life, added last year, were maintained this year.

Evaluations were once again quite similar to those seen last year. Once again, program content (91% excellent or good) received the highest rating. However, this year, preparation for a job was rated lowest, with 83% rating it excellent or good, down from 88% in 1990. As was seen last year, quality of instruction received the highest proportion of excellent ratings (41%).

Gender

Gender results were also similar to those seen last year. Women rated program content highest, while men gave the highest ratings to quality of instruction.

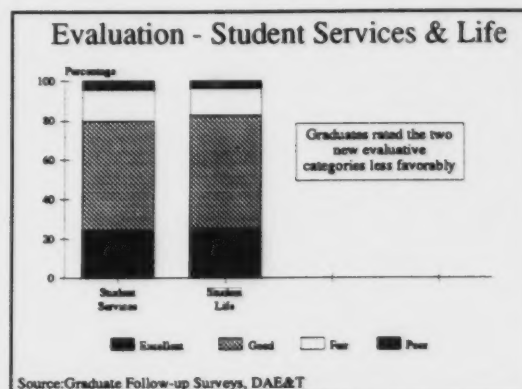

Student Services and Student Life

The categories of student services and student life (included for the first time last year) were once again the most negatively rated of all the evaluative categories, with 71% rating student services excellent or good and 78% giving similar ratings to student life.

As was the case last year, these categories also received the highest proportion of "no responses" (11% for student services and 6% for student life). Given the consistency of responses over the past two years, it appears that these categories are not as well received by graduates as the other five are.

Evaluative ratings for each college, cluster and program are detailed in the Factsheets.

USER'S GUIDE TO FACTSHEETS

Again this year, factsheets have been prepared for each college, cluster and program as well as a summary factsheet. An additional feature has been included. Factsheets have also been prepared for each college in which a program is offered. This has resulted in one hundred and fifteen (115) more Factsheets than in previous reports. Compared to the 1990 factsheets, nothing has changed with respect to format. These interpretative notes explain to readers the information they will find in each factsheet.

The college(s) where training took place is identified for the program factsheets only.

A written commentary for each factsheet highlights significant findings. Included are any references to part-time employment and, where relevant, comparisons to the 1990 survey results.

Survey Population: The number of graduates surveyed by gender and those participating are identified in this section. A response rate has also been calculated.

Labour Force Results: All survey participants are categorized according to their reported labour force activity. Depending upon their answers, respondents are classified as either employed, unemployed or not in the labour force. "Not in the labour force" is defined as anyone who is studying full-time, or not working because of illness/disability or personal/family responsibilities. All other respondents who are currently not working are considered to be unemployed.

The labour force is the sum total of the employed and the unemployed. The employment rate is determined by dividing the employed respondents by the total labour force, expressed as a percentage. The unemployment rate, therefore, is calculated by dividing the unemployed respondents by the total labour force, expressed as a percentage.

Employment: This section was expanded in the 1989 factsheets and the format remains unchanged this year. All percentages are with respect to total employed.

Employed participants are asked several questions concerning their job. Here location of work, employment status, type of employment and the relationship between their job and their training are presented.

Any respondent working more than 29 hours per week is considered to be working full-time. Average weekly earnings for full-time employment are calculated. Not all respondents provide wage information. The number that do is located next to the figure for average weekly earnings. The average number of part-time hours is also presented along with the number of graduates working part-time.

Program Evaluation: Evaluation was expanded last year to include student services and student life as well as program content, facilities, equipment, quality of instruction and preparation for a job. This table presents the percentage of graduates who rated these variables as either excellent or good.

Most Common Occupations: The three most common industries for each factsheet are given.

Most Common Industries: The three most common industries for each factsheet are given.

Unemployment: The unemployed respondents are asked the reason they are not currently working. The three most common reasons are given.

NEW BRUNSWICK

The survey response rate once again increased, this time to 80%, the highest yet recorded. The employment rate, however, fell sharply to 69%. Employment in New Brunswick rose, with 94% of employed graduates working in the province. Evaluative categories used in this year's survey were the same as in last year's and graduates from the NB Craft School were once again included in the survey population.

BATHURST

The response rate for this college increased to 83% this year. The employment rate among graduates dropped precipitously, from 70% last year to 56% this year. Men were especially hard-hit, with only half of those in the labour force employed. As was the case last year, employment and evaluation data were not significantly different from those of the sample as a whole.

CAMPBELLTON

The response rate for this college remained basically the same as last year's, at 77%. Over 80% of those responding were female. Eighty percent of the graduates in the labour force were employed, a figure significantly higher than the provincial average. As was the case last year, over half of employed graduates worked for health and social services industries.

GRADUATE FOLLOW-UP SURVEY 1991

CRAFT SCHOOL

For the second year, graduates of the NB Craft School were included in the survey. Twelve of the fifteen graduates in the population responded to the survey. Only five graduates were employed, four of them in New Brunswick. Of the three graduates employed full-time, all had work directly related to their training. Like last year, evaluative ratings for student services and job preparation were very low.

GRADUATE FOLLOW-UP SURVEY 1991

DIEPPE

Eighty percent of the graduates from this college participated in this year's survey. Employment among those in the labour force once again fell, this time to 76% from last year's 85%. Compared with last year, this year's graduates were less likely to have full-time work directly related to their training but were more likely to have work indirectly related. Evaluative ratings were similar to last year's.

GRADUATE FOLLOW-UP SURVEY 1991

EDMUNDSTON

Once again, labour force participation among graduates of this college was low (81%). Among those in the labour force, only 58% were employed, a drop of 17 points from 1990. Seventy-five percent of employed graduates had full-time jobs. Average weekly full-time earnings were the lowest of any college except for the Craft School. Evaluative ratings were somewhat higher than 1990 levels, except in the case of job preparation.

GRADUATE FOLLOW-UP SURVEY 1991

WOODSTOCK

The response rate for this college rose to 85% this year, from 77%. The employment rate among those in the labour force was 64%, a figure somewhat below the survey average. As was the case last year, the rate of employment in New Brunswick is one of the highest of any of the colleges, while the average reported full-time earnings were among the lowest. Student services were rated lower at this college than at any other, with the exception of the Craft School.

GRADUATE FOLLOW-UP SURVEY 1991

APPLIED ARTS & COMMUNICATION

The response rate for this cluster was much higher this year (87%) than last (68%). Employment among graduates in the labour force fell to 70%, the same as in 1989. Only 63% of graduates had permanent employment and only 71% were working full-time, both markedly below last year's levels. Ratings for student services were among the lowest seen in any cluster.

The response rate for this program mirrored that of the graduate survey as a whole. Only six of the eleven graduates interviewed were employed. All employed graduates had full-time jobs and all were working in New Brunswick. Quality of instruction and job preparation were rated excellent or good by all graduates. However, only one-quarter gave similar ratings to student life.

Reasons:

GRADUATE FOLLOW-UP SURVEY 1991

BUSINESS

Eighty-five percent of graduates in this cluster took part in the survey. Employment among those in the labour force was much higher than the survey average. Employment statistics, while noticeably better than those of the sample as a whole, were in line with last year's results for this cluster. Evaluative ratings were also somewhat better than those of the graduate sample in general.

Dieppe

All but one of the eight graduates of this program participated in the survey. Of the six in the labour force, only one was not employed. All employed graduates were working in New Brunswick, and two were applying their training in full-time positions. Reported earnings were markedly lower than in 1990 (\$533). Program ratings were uniformly high, with the figure for student life a substantial improvement over last year's 67% excellent/good.

CARPENTRY

Bathurst Edmundston Moncton Saint John

Eighty-five percent of the graduates of this program were interviewed. The labour force participation and employment rates are similar to last year's. Only 43% of employed graduates had permanent positions. Half had full-time work directly related to their training; however, more than one quarter of unemployed graduates could not find work related to their training. Student services and student life were rated more highly than by the graduate sample as a whole.

ELECTRICAL**Bathurst Edmundston Moncton Saint John St. Andrews**

The response rate for this program was similar to that of the survey in general. Of those graduates in the labour force, only half were employed, down from 64% in 1990. Two-thirds of those employed had full-time jobs related to training. Facilities were rated somewhat lower this year than in 1990 (90%).

DRAFTING & DESIGN

More than eight graduates in ten in this cluster participated in the survey. The employment rate rebounded somewhat from the 72% seen in 1990. The rate of permanent employment rose to 86%. As was the case last year, two-thirds of graduates had employment directly related to their training. The rating given to job preparation rose almost 20 points from last year's 68%.

HEALTH & COMMUNITY SERVICES

Three-quarters of this cluster's graduates responded to the survey. No cluster had a higher employment rate. Labour force participation was also above average, as was employment in New Brunswick. Other employment statistics were similar to those seen last year. Evaluation of facilities and equipment were somewhat higher than was the case in 1990.

COMMUNITY MENTAL HEALTH COUNSELLOR

Campbellton

The response rate for this program was below average. All graduates in the labour force were employed, an improvement over last year (82%). However, the proportion with full-time work related to training has fallen from the 1990 level (100%). Reported earnings were extremely high. As was the case last year, facilities received an extremely unfavourable rating.

GRADUATE FOLLOW-UP SURVEY 1991

NURSING ASSISTANT

Saint John

Eleven of the sixteen graduates from this college were surveyed; all were employed. As was the case in all colleges offering this program, all employed graduates worked in New Brunswick. Reported earnings were the highest in the program. Student services and student life received below average ratings.

NURSING ORDERLY

Campbellton Saint John

Seventy percent of graduates of this program were interviewed. The employment rate was somewhat lower than that recorded in 1990 (92%). All employed graduates were working in New Brunswick. All had full-time jobs and only one graduate was not applying their training. The ratings given to student services fell sharply from the 85% recorded in 1990.

NURSING ORDERLY

Campbellton

Seven of the nine graduates of this program at Campbellton were interviewed. All but one were employed. Five of the six employed graduates had full-time positions directly related to their training. Reported earnings were higher than those reported at the other college offering this program. Quality of instruction and job preparation were both rated excellent or good by all graduates.

HEATING, VENTILATION, & AIR CONDITIONING

The response rate for this cluster was somewhat less than the overall rate. All surveyed graduates were in the labour force. Employment was down 30 points from the 1990 figure and permanent and full-time employment rates were also below last year's levels. Evaluative ratings also dropped from last year, especially in the case of student services and student life.

REFRIGERATION AND AIR CONDITIONING

Edmundston

The response rate for this program equalled that for the graduate survey as a whole. The employment rate plummeted from the 80% observed in 1990. One of the employed graduates was working outside New Brunswick, and only one had a full-time job related to his training. Reported earnings were lower than in 1990 (\$319). Evaluative ratings were also lower, most notably for job preparation (80% excellent/good in 1990).

ACCOMMODATION, FOOD & BEVERAGE SERVICES

Edmundston St. Andrews

Over 70% of graduates in this program were surveyed. The employment rate among graduates has fallen sharply from 1990's 82%, but is still slightly above average. Employment in New Brunswick is substantially higher than that seen last year, but the rate of permanent employment has dropped. Evaluative ratings this year were similar to those seen last year, with the exception of student services and student life, which received much lower ratings, particularly student services (37% excellent/good).

GRADUATE FOLLOW-UP SURVEY 1991

COOK

Edmundston Moncton

The response rate for this program was slightly below average. The employment rate among graduates was similar to last year's but a smaller proportion of graduates were in the labour force. All employed graduates were working in New Brunswick, but only half had jobs directly related to their training. Program ratings were very favourable.

COOK**Edmundston**

Nine of the thirteen graduates of this program at Edmundston were interviewed. All but one were in the labour force and all but one of these were employed. All employed graduates were working in New Brunswick and all but one had full-time work related to their training. Reported earnings were far below those of the other college offering this program. Evaluative ratings, however, were higher.

MOTOR VEHICLE REPAIR (TRUCK AND TRANSPORT)

Bathurst Moncton

The response rate in this program was down from last year's 88%. However, all graduates were in the labour force and 80% were employed, both slight improvements over last year's figures. All employed graduates were working in New Brunswick and all had full-time positions. Equipment and quality of instruction received much higher ratings this year (53% and 73%, respectively, in 1990).

MACHINIST**Bathurst Moncton Saint John**

Over three-quarters of the graduates of this program were interviewed. Although the labour force participation rate was higher than last year's (87%), the employment rate was much lower (78% in 1990). Over 80% of employed graduates have full-time jobs, only 30% had jobs directly related to their training, (compared with 67% in 1990). Evaluations were once again very high with the exception of student services.

WELDING

Bathurst Moncton Saint John St. Andrews Woodstock

This program had one of the largest survey populations. It had an average response rate. Less than half of those graduates in the labour force were employed, a drop of 10% from last year. Ninety-six percent of employed graduates were working in New Brunswick. Seven in ten had full-time jobs related to training. Evaluative ratings were somewhat lower than those of last year.

NATURAL RESOURCES

The response rate for this cluster was somewhat higher than for the survey as a whole. Although the labour force participation rate was higher than last year's (87%), the employment rate was much lower than in the 1990 survey (67%). Half of the employed graduates had full-time work directly related to their training. Reported earnings were well above the survey average. Evaluative ratings were lower than last year's for all categories except student services and student life.

The response rate in this program was similar to that of the overall survey. The employment rate among graduates in the labour force fell precipitously from last year's already low figure (57%). The lone employed graduate was not applying his training. Half of the unemployed graduates were awaiting recall after a layoff. Program evaluations were lower than last year's in all categories except student services (40% excellent/good in 1990).

Saint John

Less than two-thirds of the graduates from Saint John were interviewed. Of these eight respondents, seven were employed, all in New Brunswick. The proportion with full-time jobs directly related to training was somewhat lower than the program average, as were reported earnings. All facets of the program were evaluated as excellent or good by all respondents.

BEAUTY CULTURE

St. Andrews

All but two of the thirteen graduates of this program for St. Andrews responded to the survey. Of the nine in the labour force, only one was unemployed. All employed graduates were working in New Brunswick. Three-quarters had full-time jobs related to their training. Except for student life, this college's graduates rated the program and the college very highly.

The response rate for this program was similar to that of the survey as a whole. Ninety percent of those interviewed were in the labour force. Employment has fallen from last year's 80%. Almost all graduates were working in New Brunswick; about two-thirds have full-time positions related to their training. Once again this year, evaluations were similar to those of the graduate population in general.

MEDICAL TRANSCRIPTIONIST**Campbellton Woodstock**

The response rate in this program was the same as it was last year. Employment was once again high, exceeding last year's 94%. One graduate was employed outside New Brunswick. As was the case last year, all graduates employed on a full-time basis had jobs related to their training. Program content and quality of instruction were rated as excellent or good by all graduates.

STENOGRAPHER

Bathurst Edmundston Miramichi Moncton Saint John St. Andrews Woodstock

The response rate for this program was well above average. The proportion not in the labour force was triple that of last year. Three-quarters of graduates were employed, compared with 82% in 1990. Almost all employed graduates were working in New Brunswick. Sixty percent had full-time jobs related to their training. Evaluation results were once again similar to those of the overall survey.

CABINET MAKING & MILLWORK**Saint John**

All six graduates of this program were interviewed. All were in the labour force and only one was not employed, a great improvement over the last two years. All employed graduates were working in New Brunswick and all had full-time work related to their training. Once again this year, preparation for a job received a low rating.

UPHOLSTERY

Campbellton

Two of this program's four graduates were interviewed. One was employed outside New Brunswick in a full-time job directly related to his training; the other was unemployed. Neither graduate rated student services or job preparation as excellent or good.
